

A web-based ERP for an **agricultural input (fertiliser, pesticide, seed) distribution company** in Bangladesh, covering the full head office → region → area → territory → dealer network.

1 MODULE MAP

☐ General ERP module ☒ Contains agriculture-specific screens

Agriculture-specific screens: Batch, Repacking and Product Demand (Inventory) · dealer licence register and licence categories (License) · Daily Visit and Daily Meter (HR Management) · Office, Region and Area Mapping (Mapping). These do not appear in general-purpose ERP packages.

2 ROLE HIERARCHY

Users of the System

Eight roles — seven internal, one external

AgriVision ERP
Project Outline
Page 2 of 3

Super Admin

IMPLEMENTED

- Who** IT administrator or business owner — one or two accounts only.
- Does** Keeps the system running and controls who can see what.
- Full** Every module; user accounts; page permissions; system settings.
- No** Nothing is restricted — but every action is recorded in the audit trail.

Managing Director

PROPOSED

- Who** Business owner or general manager; does not do daily entry.
- Does** Monitors performance and approves high-value decisions.
- View** All modules and reports, all offices; approves credit limits, discounts, targets.
- No** Create users, change permissions, edit posted entries, change settings.

Area Manager

PROPOSED

- Who** Manages one area containing several territories and their officers.
- Does** Hits the area's sales and collection targets; supervises officers.
- Full** Sales, collection and customers *within own area*; approves returns and targets.
- No** Other areas; purchase; supplier payment; product prices; user accounts.

Sales Officer

PROPOSED

- Who** Field representative for one territory — the largest user group.
- Does** Takes orders, collects payment, reports daily visits.
- Full** Orders and collection *in own territory*; own customers, ledgers and reports.
- No** Edit a confirmed invoice; other territories; prices; accounts or purchase.

Accountant

PROPOSED

- Who** Head-office finance staff.
- Does** Maintains the books — receivables, payables, expenses, bank.
- Full** All Accounts screens; supplier payments; commissions; financial reports.
- No** Create sales; change stock; edit product or dealer master; create users.

Storekeeper

PROPOSED

- Who** Warehouse staff at head office or a regional depot.
- Does** Keeps physical stock and system stock identical.
- Full** Goods receipt; returns; damage; repacking; stock reports; product demand.
- No** Create sales; see prices, margins or any financial report; make payments.

Delivery Man

PROPOSED

- Who** Driver or delivery staff — the smallest permission set.
- Does** Moves goods from depot to dealer and confirms receipt.
- View** Own delivery orders and challans; updates status; records receiver's name.
- No** See any amount or price; others' deliveries; create or edit an order.

Dealer — external

PROPOSED

- Who** The retail shop owner who buys from the distributor.
- Does** Self-service — checks their own account without phoning the officer.
- View** Own ledger, dues, invoices and offers; requests orders; uploads licence documents.
- No** Any other dealer's data; company stock, cost or margin; confirm own order.

On the tags. The permission mechanism itself is built and working (see page 3), and it can express any of these roles today by ticking pages for a user. What is marked **Proposed** is the named role preset and the record-level scoping — restricting a user to their *own* area, territory, assignments or account. Access control today is page-level.

Access & Roadmap

What each role may do, how it is enforced, and what comes next

3 ACCESS MATRIX

Module	Super Admin	Managing Director	Area Manager	Sales Officer	Accountant	Storekeeper	Delivery Man	Dealer
Dashboard	✓	R	R	R	R	R	R	R
Sales & Returns	✓	R	✓	✓	R	×	×	R
Purchase	✓	R	×	×	R	✓	×	×
Stock & Inventory	✓	R	R	R	R	✓	×	×
Batch / Repacking	✓	R	×	×	×	✓	×	×
Product Demand	✓	R	✓	R	×	✓	×	×
Accounts & Ledgers	✓	R	R	R	✓	×	×	R
Cash Collection	✓	R	✓	✓	✓	×	×	×
Reports	✓	R	R	R	R	R	×	R
License	✓	R	R	R	R	×	×	R
Product / Categories	✓	R	R	R	R	R	×	R
Customer (Dealer)	✓	R	✓	✓	R	×	×	R
HR & Payroll	✓	R	✓	R	R	R	R	×
Delivery	✓	R	R	R	R	✓	✓	R
Admin (Users)	✓	×	×	×	×	×	×	×
Settings	✓	R	×	×	R	×	×	×

✓ create and edit · R read only · × no access. For Area Manager, Sales Officer, Delivery Man and Dealer, access is further limited to their own area, territory, assignments or account.

4 HOW ACCESS CONTROL WORKS

Page-level permissions, editable without touching code

WORKING NOW

1. menu.js holds one shared menu tree and flattens it into a list of every page path in the app.

2. Each user record carries a permissions array of those paths; the Admin page edits it with tick boxes, so access is granted or revoked without a code change.

3. ProtectedRoute checks every navigation against that array and blocks the route with an Access Denied screen if the path is not listed.

5 PROPOSED FEATURES — PLANNED FOR NEXT PHASE

1. Dealer Licence Compliance

CONFIRMED

What

Records every dealer's government licence and its expiry, and refuses a restricted sale when that licence has lapsed — a manager may override with a written, logged reason.

Unique

Tally, Odoo and local products model the buyer as a ledger with a credit limit; none gate a product category on the buyer's regulatory licence.

Needed

Legal obligation — selling pesticide, and separately fertiliser, requires the buyer to hold a valid government licence or dealer registration.

2. Banned Product Block

CONFIRMED

What

Marks a product banned from a stated date and refuses its sale and purchase from that date, while earlier transactions stay valid and printable.

Unique

A general ERP has only an Active/Inactive flag, which hides a product retrospectively; none can express “banned going forward, valid historically”.

Needed

Legal obligation — pesticide registrations are withdrawn by government notification with effect from a stated date.

3. Bengali Safety Panel on the Invoice

CONFIRMED

What

Prints the hazard class, signal word, pre-harvest interval and first-aid note in Bengali on the dealer's own invoice, for every agrochemical line.

Unique

An ERP invoice is a purely financial document everywhere else; no commercial ERP carries regulated safety information through to the end user.

Needed

Real-world problem — the dealer is the last person who speaks to the farmer, and dosage and safety advice is passed on verbally or not at all.

The strategy: these are not three separate features. They are three rules applied in sequence on one new Sales Entry screen — a single point-of-sale rule engine, built once and extended rule by rule.

SUBJECT TO TIME

A fourth rule — blocking the sale of expired stock, with an expiry dashboard — is planned only if the first three finish on schedule.

6 CURRENT STATUS

- **Built and working:** all 93 screens, the navigation tree, multi-user login, and the page-level permission system with its Admin editor — enforced at route level.
- **Next, and prerequisite to the features above:** a **Sales Entry** screen (the app has lists and status workflows but no order-entry form yet) and **Firestore** persistence for products, customers and sales — data is currently sample data held in the page.
